LONG DISTANCE APPLICATIONS

Stratus Long Distance service provides a complete range of voice communications solutions for businesses of all types and sizes. Whether it's connecting two offices in the same city or state or 100 branches across the country or world, long distance service enables a wide range of applications.

- Connect VoIP networks across the city, state, country or world
- Extend or connect LANs between sites
- High bandwidth Internet access
- Video conferencing and streaming
- High-speed file and image transfer
- Remote monitoring and control systems

LONG DISTANCE SERVICES

When cost, quality, reliability and ease of use are all priorities for voice communications, Stratus long distance services present an ideal solution. Whether your needs are primarily in-state, international or inbound, Stratus delivers options to meet any need.

Stratus Long Distance Switched service uses local business telephone lines to access the Stratus network. By simply changing the business line "carrier code" Stratus becomes the long distance provider for 1+ calls. No additional hardware is required. Switched solutions are typically best suited for businesses with lower call volumes.

Stratus Long Distance Dedicated service uses a dedicated T-1 (1.544 Mb/s) digital circuit to provide direct and cost-effective access to the Stratus network. Up to 24 voice connections per dedicated circuit are available resulting in significant savings when compared to local business line access. Dedicated solutions are typically best suited for businesses with higher call volumes.
